Chapter 53

Plate Numbers 39000-39999

Plate number 39000 was assigned to the 15c Toleware stamp in February, 1979 and plate number 39999 was assigned to a \$2 Kerosene Lamp offset plate in December, 1981. The major event in this series was the new plate numbering system which began with stamps issued in 1981. The new system has plate numbers assigned as they were in the past but the real plate number does not appear on the finished product. Instead, a code number representing the real plate number appears. Each stamp's first plate is given plate code number 1 and each new plate required is given a code number incremented by one. If a stamp requires multiple plates or cylinders to produce the stamp (for example, a stamp might be printed on a gravure press using four different color cylinders), each different color would be given code number 1 for the first plate(cylinder) and each different color would increment by one for each additional cylinder. The plate code number is made part of the design for coil stamps and the code number appears in the tabs of booklet stamps (and on the stamp in some recent booklet issues). The USPS came up with the new plate number scheme apparently to instill new interest in plate numbers by returning to the plate block of four stamps concept and by offering plate (code) numbers on coil stamps for the first time, and plate numbers on booklet stamps for the first time since the flat plate presses were used to print booklet stamps. The idea seemed to work since the collecting of coil plate numbers boomed. The interest in the booklet plate numbers was much slower to develop and interest in the sheet stamp plates has remained cool.

Two other major events to occur within the 39000 series were the launching of the Great Americans regular issue in 1980 and the Transportation coil series in 1981. Each of these has become the longest running series of definitives produced by the BEP. No longer were coil and booklet stamps a minor variety of the sheet stamps. Now each stamp format had its own series. This series also saw two rate changes occur. The rate was raised from 15c to 18c on March 22, 1981, then it was raised again to 20c on November 1, 1981. The 18c rate was initially covered by the 'B' stamp and the 20c rate was introduced by the 'C' stamp.

The Prominent Americans series was still active with most of the action centering on the 5c Washington and 15c Holmes stamps. Eighteen plates of the 5c Washington sheet stamp went to press with the first six plates' product having shiny gum and the final twelve plates with dull gum. All of these plates are easy to find but the dull gum copies appear scarcer since these were saved mainly by matched set enthusiasts. There were eleven 5c Washington coil plates to press and seven of these are unreported. The 5c Washington coil design utilized the original 'dirty-face' design but somehow the BEP made two of the coil plates from the clean-shaven die and copies of these plates are known and are nice items to have. The 15c Holmes had eight plates to press printed from a new die. These Die II plates were again saved mainly by matched set collectors. None is really scarce but they carry a premium since only a small fraction of the saved

15c Holmes plates are the Die II design. The Die II was also used on 25 coil plates sent to press and 17 of these are unreported. The six 15c Holmes booklet plates are unavailable to collectors. The remainder of the Prominent Americans plates were three unreported 1c Jefferson coils, two 7c Franklin sheets, and two 25c Douglass sheet plates. The sheet plates are easy to find.

The Americana series was no busier than the Prominent Americans series since each had only 75 plates available to collectors. The 1c stamp had four sheet and two coil plates to press and only the coil plates are difficult. The 2c stamp was printed from four plates and twelve plates were used on the 3c stamp. The heavy use of the 3c stamp occurred with the rate changes. The 4c stamp was printed from eight plates and none of the 2c, 3c, and 4c plates is scarce. A 3.1c coil was issued and printed from four plates with two unreported. The 3.5c coil was printed from six plates with four unreported. As usual, these coil plates are scarce. The 8.4c coil was printed from six plates and all are unreported. Collectors should have no problems locating the four 10c plates, or the five 30c plates. The high values group of four stamps was completed with the issuance of the 50c, \$1, and \$5 stamps. All of the plates used to print the high values are easy to find with the exception of four of the \$5 plates that are quite scarce.

The Great Americans series was unusual in that it consisted of only sheet stamps (except for a 25c Jack London stamp that was also issued in booklet format when the rate was upped to 25c). The first stamp issued was the 19c Sequoyah which appeared in December, 1980, just before the new plate number scheme took effect and, as a result, this is the only Great Americans stamp with real plate numbers. Seven of the new stamps appeared in the 39000 series and only plates with code numbers 3 and 4 on the 35c Drew stamp are scarce.

The classic Transportation coils made their debut in 1981 with five stamps being issued in the 39000 series. Collectors soon became interested in these coils which featured the plate code number as a part of the stamp design. Many collectors began saving these coils as pairs or strips of three which is the reason many of the early Transportation coils are quite expensive as strips of five. None of these plates is really scarce but collector demand has caused high prices for some of these plates. The 9.3c Mail Wagon stamp was issued with two plates to press that are available with and without a precancel. The 17c Electric Auto stamp was issued with seven plates to press. All seven are available without a precancel and some of these plates exist with three types of precancels. The 18c Surrey stamp had 18 plates to press and none is really scarce but collector demand has kept the prices high for plate strips of five for plate code numbers 1, 3, 4, and 7. The rate change to 20c brought about the 20c Fire Pumper coil and ten plates went to press. Plate code number 2 is the most expensive and plates 1, 7, and 8 are also expensive as strips of five.

The flag stamps were active with three different 18c flag stamps with a related theme being issued. The 18c sheet stamp had two cylinders to press and both are easy to find. The 18c flag coil had seven cylinders used and the 18c flag coil plate code number 6 is scarce and is the current price king. Plates 1 and 3 are also expensive in strips of five. The 18c flag booklet is an interesting pane in that each pane consists of six 18c flag

stamps and two 6c stamps with the 6c design being the denomination surrounded by 13 stars. One printing cylinder was used and these are easy to find.

The special definitives stamps were in use as the B and C stamps were printed from plates in the 39000 section. There were 12 B coil plates to press and one is unreported. The C coil is tougher with 23 plates to press and only five have been found. The B and C booklet plates are not available. The 15c windmills booklet was printed from plates in this section and none of the 29 plates to press is available. Recently a collector noticed a miscut with 2 panes each with a plate number. So 2 plate numbers were found on the windmills 40 years after the stamps were issued! The change in the postage rate to 18c caused the issuance of the 18c Wildlife booklet. Sixteen plates were used and the new plate number system was in effect so the booklet tabs contained the plate code numbers. These plates are not scarce but prices are rising since not too many collectors had been in the habit of saving booklets. This could have been an attractive issue but the small size and drab brown color really detracted from its appeal. The 20c Sheep booklet used one of the 18c Wildlife designs and the blue color was an improvement but the small size was a detraction. The 20c Sheep booklet also saw the size of the plate code number in the tab shrink dramatically to a size similar to the coil plate code numbers. The USPS fascination with the small size stamps would soon end.

The commemorative stamps through 1980 were fairly routine and all product from the plates used the real plate numbers. The 15c Dirksen stamp of 1981 was the first commemorative stamp to use the plate code numbers. The real challenge for collectors came with the 18c Yorktown and the 20c Desert Plants stamps. These were combination offset-intaglio issues and the first regularly available offset plates since the Washington-Franklin regular issues. The intaglio plates and the offset plates are no problem but the collector who is interested in combinations has a severe challenge. The toughest by far is the 18c Yorktown stamp. There are nine offset combinations and the rare combination is 211112 which still has some unreported positions. Offset combination 211111 combined with intaglio plate 5 is very rare. The 20c Desert Plants has no scarce plate numbers but some of the combinations are quite scarce; however their difficulty does not approach that of the 18c Yorktown.

Air mail stamps were active in this section with 30 plates to press. The 21c Chanute stamp was printed from eight plates and the last four (39017-20) are scarce. The 40c Mazzei plates 39461-6 are known in two perforation varieties and the EE perforation (10.5x11.3) is a scarce item.

It would be hard to pack more drama into a series of plates and the 39000 section must hold the record for plate number turmoil. That is what makes it one of the more fascinating series to collect. 772 plates went to press and there are 374 real plate numbers and 285 code plate numbers available to collectors. 56 of the real plates are unreported and these are all coil plates. The new plate numbering system makes possible collecting a larger percentage of plates since there is no longer the challenge of finding partial plate numbers on coil and booklet stamps. Even so, it will be difficult for the collector to approach the 85% level in this section. The 40000 section is next and we will see what impact the new plate numbering system is having and find out how many real plate numbers are left to find.
